What is Lost & Found App?

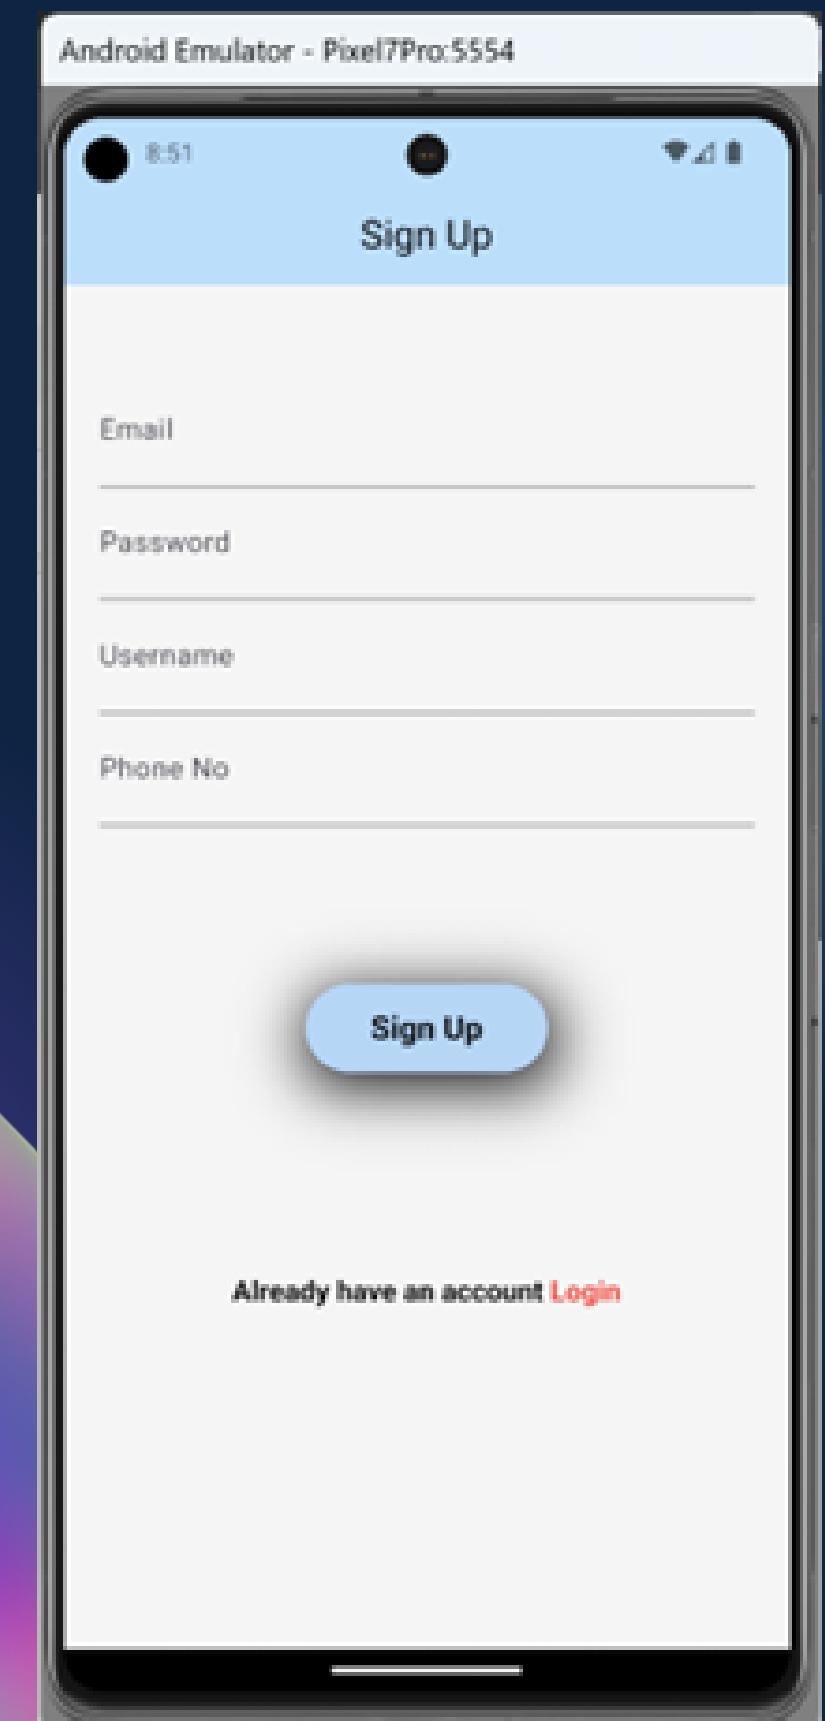

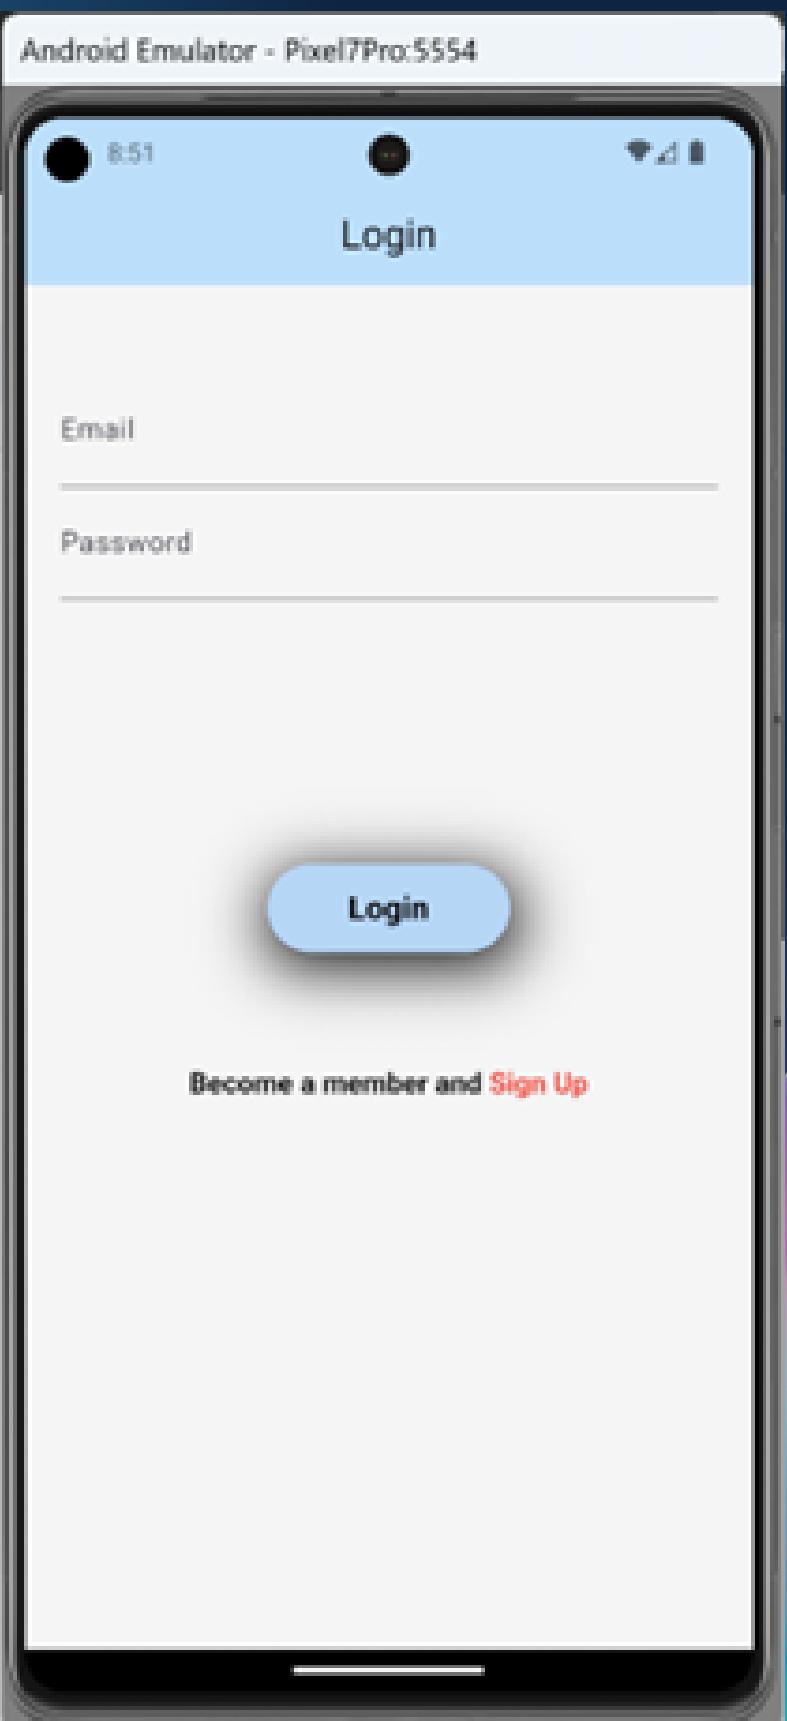

Lost and Found apps aim to help users recover lost items by allowing them to report the details of their lost possessions, such as descriptions and locations. These apps also assist in searching for matches and send notifications when a relevant found item is reported. Users can communicate through the app to coordinate the return of lost items, and user profiles offer a way to manage reported items and track their status. Features may vary, so checking the latest information on app stores is recommended for the most accurate details.

Prototype Design and Navigation

Auth Screen

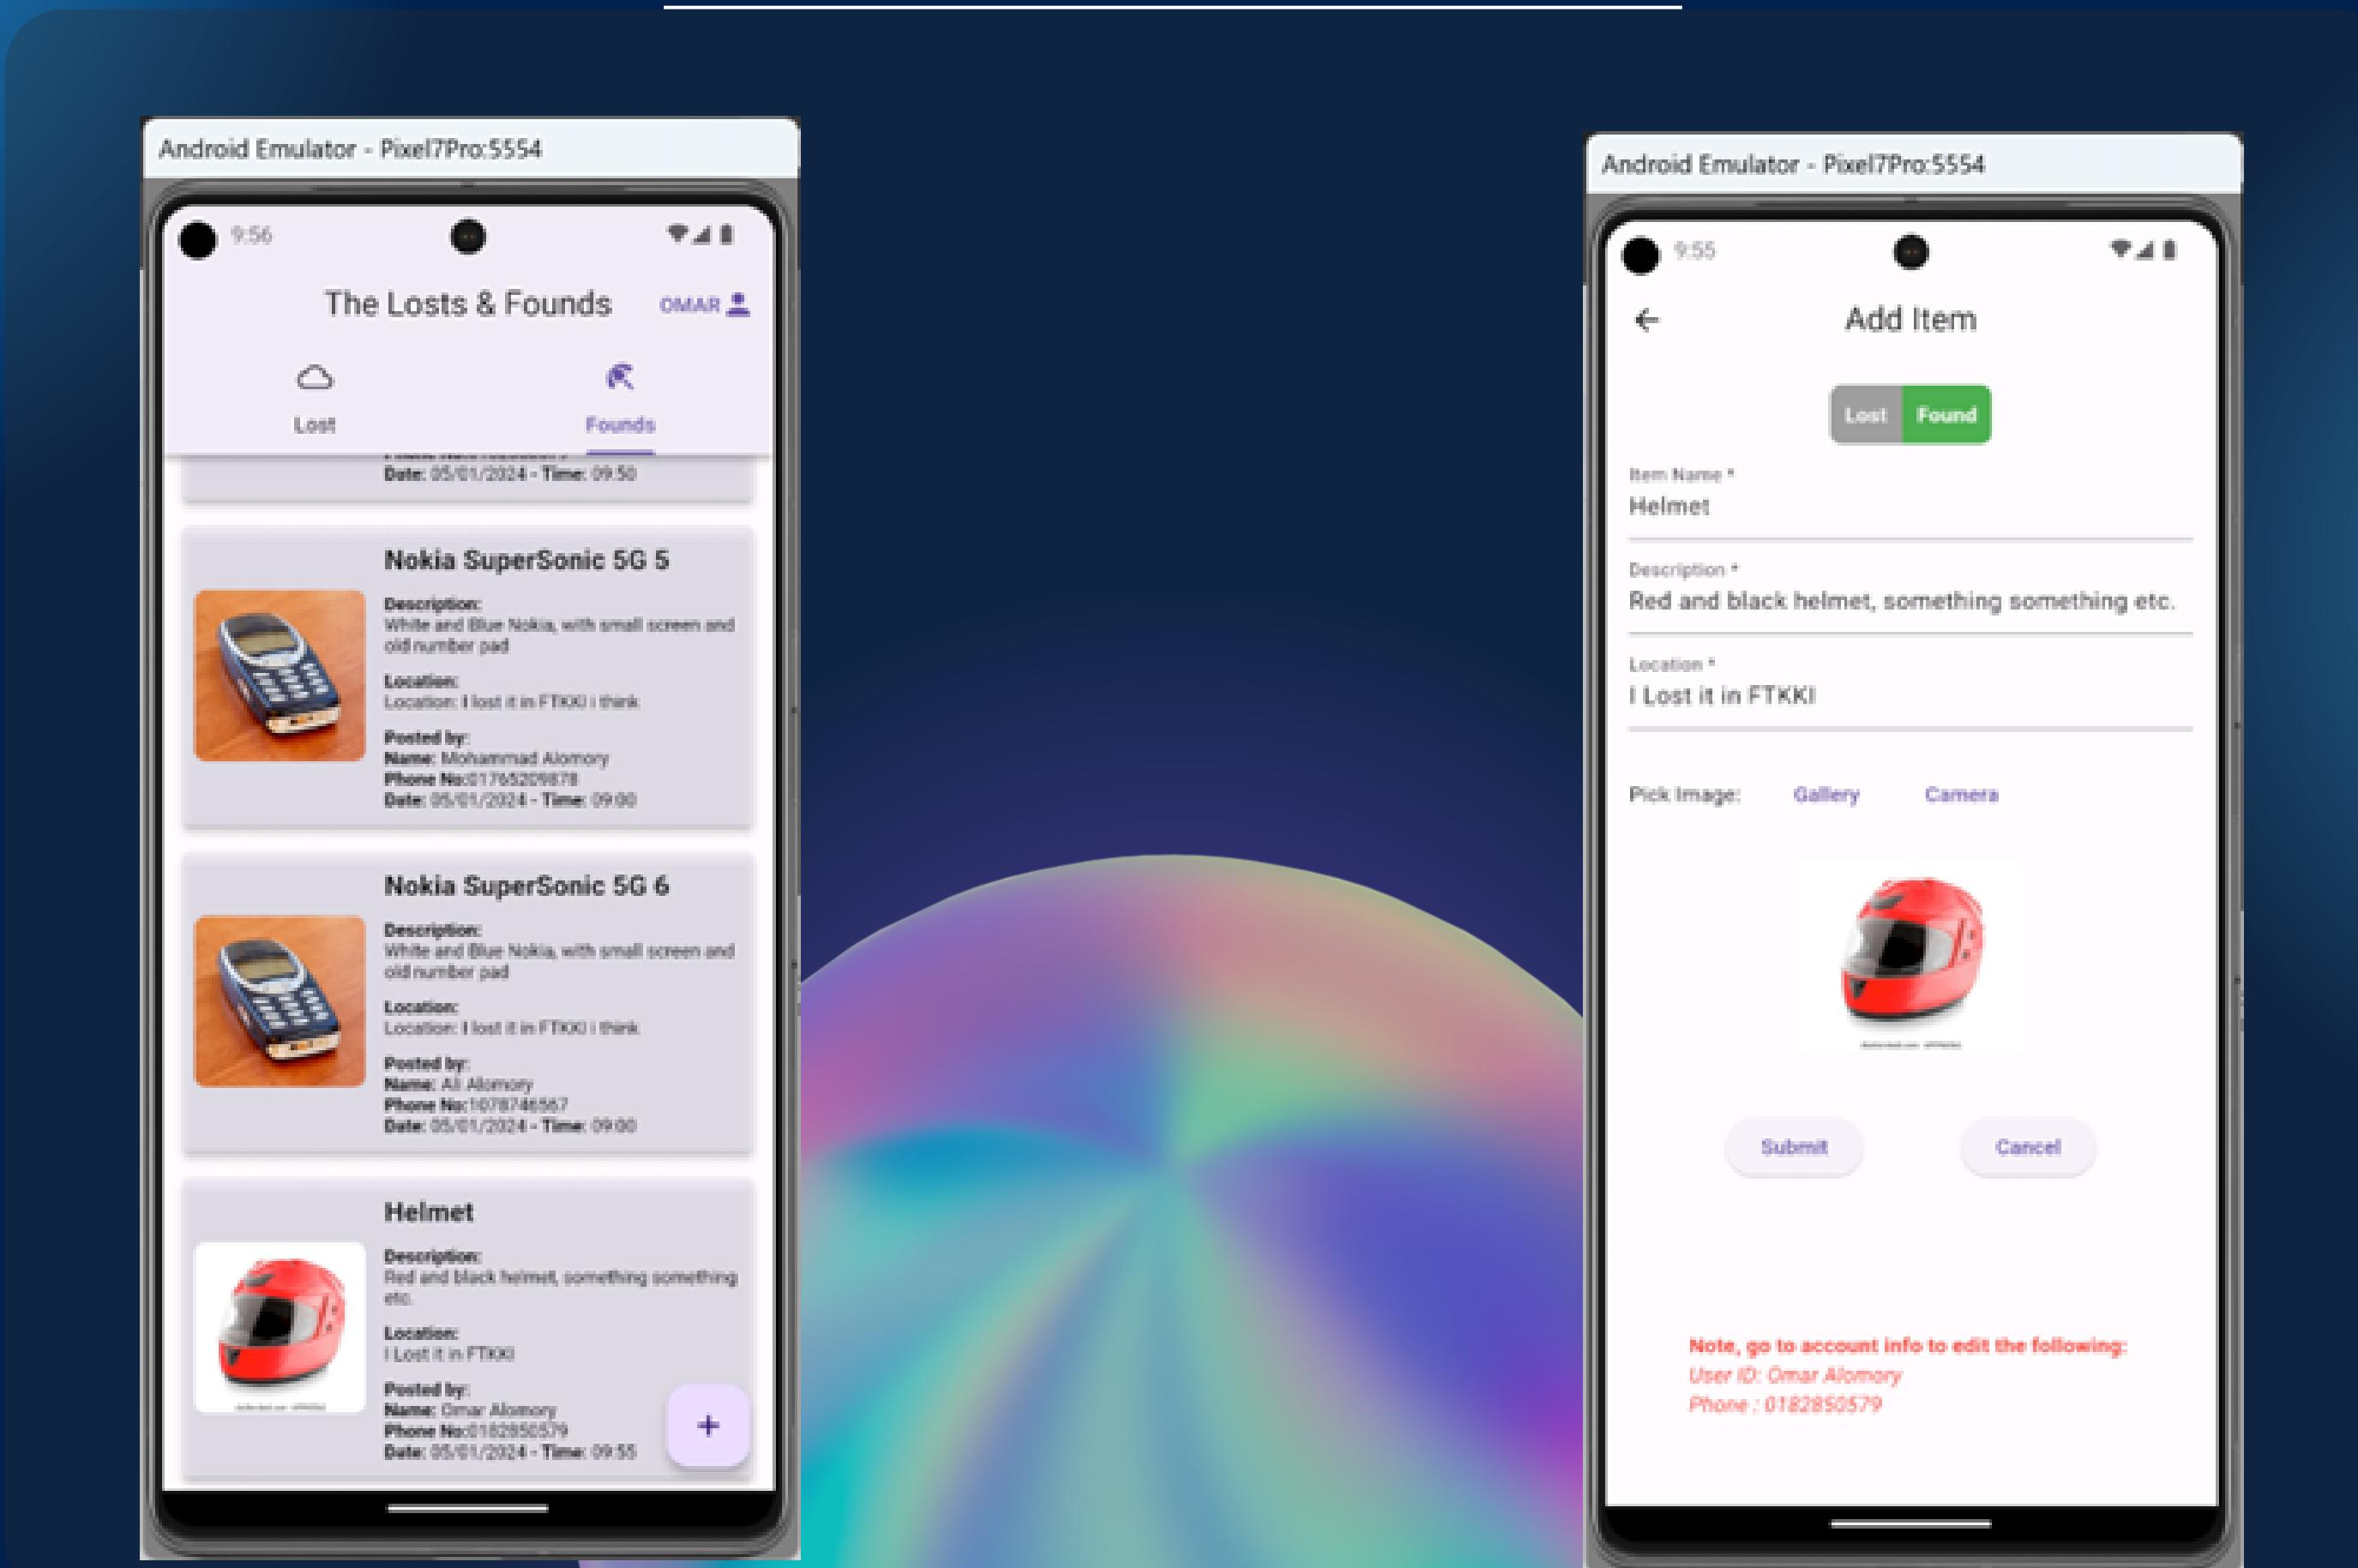

Main Screen

The image displays two identical screenshots of a mobile application interface titled "The Losts & Found". The app is running on an Android emulator (Pixel7Pro:5554) at 9:00. The interface features a header with the title and a user profile for "OMAR". Below the header are two tabs: "Lost" (selected) and "Found". The main content area shows six items, each representing a lost item:

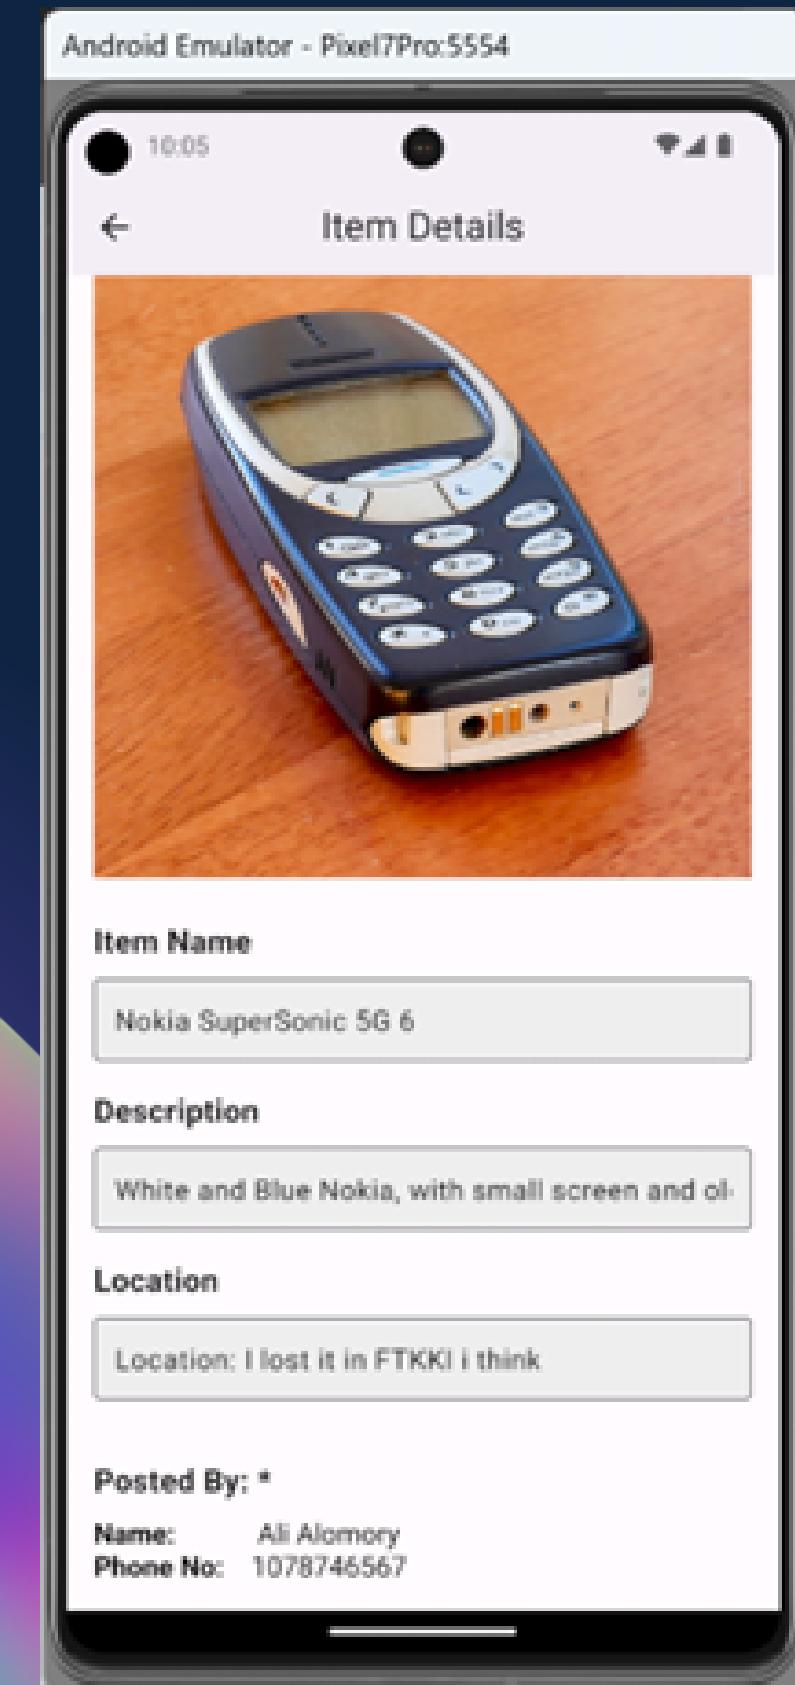

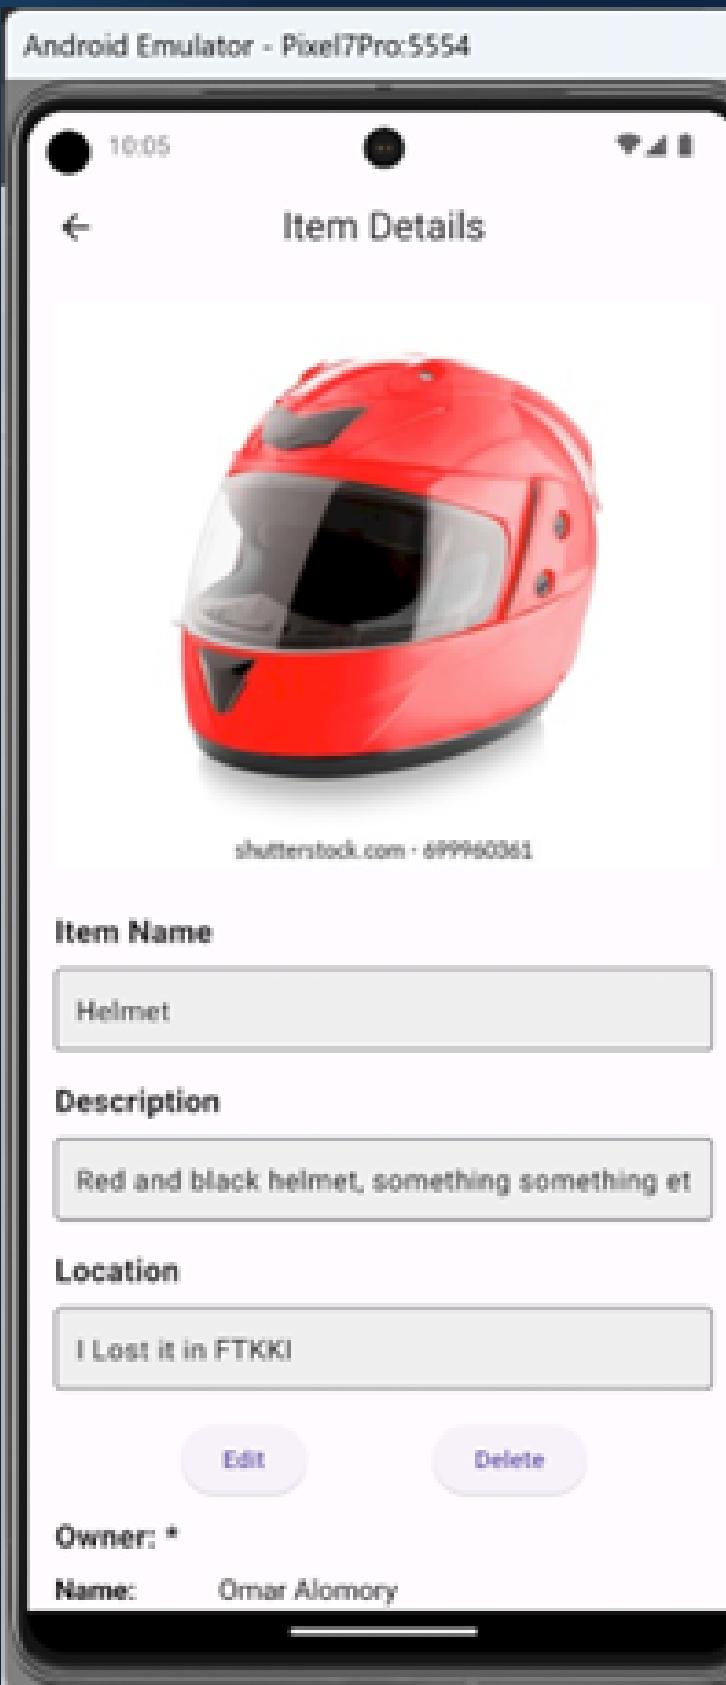

- Nokia SuperSonic 5G 1**
Description: White and Blue Nokia, with small screen and old number pad.
Location: Location: I lost it in FTXOO i think.
